

# GlideLift

low level access platform

No battery ✓ No maintenance ✓ No problem ✓

## At last and about time!

Since the introduction of the Work At Height regulations in 2005 there have been many attempts to provide a replacement for step ladders in the work place. All types of access platforms that never existed pre 2005 have been introduced to the market.

Podium steps have become very popular and even powered access platforms that reach just 3 or 5 metres, who would have guessed it. But it has taken years for a truly low cost, simple, height adjustable platform to make an appearance.

The GlideLift from Working At Height is a height adjustable access platform for all work up to a reach height of 4m. Evolved from our Deskglider, the hugely popular over desk platform, The GlideLift still retains its over desk capability but at last offers the most versatile, low cost, low level access platform on the market.

safe • simple • height adjustable • maintenance and battery free.

You think it, you need it and we make it, at last!

## Work At Height Regulations

The GlideLift ensures compliance with the Work At Height regulations 2005 and offers the user complete guardrail protection at all times whilst working, protecting them from falls.

## Zero cost of ownership

Ownership of The GlideLift is zero as it falls outside of the LOLER regulations.

The GlideLift is a truly versatile replacement for step ladders. Weighing only 90kg and mounted on swivel castors for ease of positioning, it will mean no more carrying large step ladders around site, no more adjusting podium steps or owning various height podiums steps to offer height variation, building low level towers or investing in more expensive low level powered access platforms.

Since the introduction of the Work At Height regulations in 2005 there have been many attempts to provide a replacement for step ladders in most work places in the UK. Safety is our number one priority, two is productivity, with the GlideLift both go hand in hand.

- **Working Height:** 4.0m
