## Key Specifications

MEASUREMENTS	US (Metric)
Platform Height	12 ft (3.66 m)
Stowed Height	67 in (1.70 m)
Lift Capacity	500 lbs (227 kg)
Platform Area	1,160 sq in (.75 sq m)
w/Extension Deck	1,550 sq in (1 sq m)
Raise/Lower Speed	12/16 sec

## Options

Options and accessories include an inverter, flashing beacon, auto horn, maintenance-free battery and fluorescent tube caddy.

## New Genie® Runabout™ Contractor Is Construction-Ready for Two

The new Genie® Runabout™ Contractor (GRC™-12) is designed for durable and productive performance on a variety of indoor construction sites — offering a two-person working platform and an enclosed, capped boom mast for added protection from worksite debris. From electrical work to HVAC installation, operators will find the new Runabout™ Contractor efficient to use, convenient to operate and easy to service.

### Platform Workspace

The GRC™-12 offers a steel platform that expands with a slide-out extension deck, which gives operators an extra 17.5 in (44 cm) of outreach.

This expanded workspace comes standard on the GRC™-12 and is rated for two people. All other Genie® Runabout™ models are able to carry only one person on their standard platforms. Combined with a lift capacity of 500 lbs (227 kg) that allows operators to work to a height of 17 ft 5 in (5.31 m), the Genie® Runabout™ Contractor provides the ultimate in construction site productivity.

Additional efficiency features include two tool trays — one on each side of the mast — that come standard and put everything operators need within arm's reach.

*Continued on next page*

A standard extension deck holds two workers with up to 1,550 sq in (1 sq m) of workspace.

The covered steel telescoping mast is built for durability in rough work environments.

Durable, flexible ABS material helps the rear access covers maintain their shape. They open wide for easy service access.

Standard work trays on both sides of the mast keep tools and fasteners handy.

## New Genie® Runabout™ Contractor *(continued)*

The GRC™-12 is also drivable when fully elevated, and the zero inside turning radius allows for quick maneuverability in congested workspaces.

Like the GR™-12, the 12-ft GRC™-12 Runabout™ Contractor is lightweight and easy to fit through elevators and doorways. Driving and steering are also the same as the GR™-12, so no retraining is required.

### Encased for Indoor Construction

Genie has designed the new Runabout™ Contractor with one important addition — an enclosed and capped boom mast. The telescoping arm is encased in steel, which provides additional protection against worksite debris. The cap on top of the mast prevents small parts and pieces from falling into the mast and jamming the equipment, and it ensures that the unit remains productive in almost any indoor construction environment.

The GRC™-12 is also made to be more durable for undeveloped worksites, including drywall installation and repair, electrical wiring and HVAC work. The covers on the machine are constructed from ABS, a thermoplastic material that provides increased flexibility while retaining its shape. The ABS design acts as a safeguard against worksite damage and allows the GRC™-12 to stand up to falling debris and rough, unfinished corners.

### Simple Service

With the Genie® Runabout™ Contractor, uptime is increased because the entire unit is easy to service. The mast cover that makes the GRC™-12 so durable for indoor construction also detaches easily for efficient

servicing. To access the mast, the operator simply unattaches the two bolts that secure the cover. Bolted mounting lugs, as compared to welded, offer easy access for servicing.

The unit is also uniquely engineered with a quick-disconnect platform for ease of repair or replacement. The mast hydraulic cylinder, located just under the cap, can quickly be unbolted and pulled out for efficient servicing. Key components on the GRC™-12 are easily accessible through the access doors on the base, allowing for quick troubleshooting and regular maintenance checks. Plus, because the GRC™-12 is engineered with common components, keeping the unit rental-ready is simple, too.
